

# DINASAN P

detergent and disinfectant for massage bathtubs, biocide product

The DINASAN P cleaning and disinfecting agent is suitable for cleaning massage bathtubs and connecting wires and blowers.

The agent removes organic impurities (biofilm, oils, soap, and greasy deposits) that adhere to hard-to-reach surfaces.

It works great even where mechanical cleaning is difficult to solve.

Also suitable for surface cleansing, it removes effectively mucous dirt, soap residues, oily, greasy deposits (which often cause pool foaming) on the wall of the pool, eliminating the cause of foaming.

## APPLICATION:

- Add 250 g of DINASAN P per cubic meter to the filter unit prior to draining to the used bathing water intended for draining.
- If insertion into the skimmer or filter unit is not possible, release the required amount of approx. 5 liters of water and pour directly into the massage pool.
- After the addition, rotate the water for at least 5 minutes.
- Stop water rotation and allow the agent to act for at least 1 hour to remove dirt and for 1 hour to achieve guaranteed disinfection.
- After the time has elapsed, turn the water again for a few minutes.
- Lower the water and rinse the tub.
- Fill the bathtub with a small amount of clean water, rotate the system approx. For 5 minutes, the substance remains in the conduit

## CLEANING SURFACES:

DINASAN P is also suitable for cleaning the pool surface as follows:

- Drain the water from the pool.
- Moisten the pool wall.
- Spray the agent directly on the surface, then rub it thoroughly with a plastic brush to clean it.
- Rinse the agent (preferably with warm water).

## IMPORTANT:

It can only be used for cleaning pools. Do not use alkali on non-resistant surfaces (eg aluminum), if still on such surfaces, wash with plenty of water!

**PACKAGING** 1 kg box, 10 kg bucket

Use biocides safely! Always read the instructions before use label and instructions for use!
